

NOOL Alerts Management System

Release: 2.1

New features in R2.1:

1. Design:

- a) Extended the range of „number of records per page“ (100,200).
- b) **Export to xlsx format** option added.

2. Alert:

- a) A new field „Manual entry Y/N“ – in detail or in a column (+ filter).
- b) A new field „Note“ to be optionally edited by MAHs.
MAHs can also opt to set the notes invisible to others.
- c) A new column „Date of expiry“ (stored) (+ filter).
- d) Added „is not equal to“ option in the „Error code“ field.
- e) An anonymous group of alerts per end user – for MAH. This option will only display the number of the respective group for the end user and a filter. No location details will be provided.

3. Activities

- a) **Data import - bulk update of alert states** featuring a simple wizard that will guide through each step + protocol including a change log.
- b) An option to insert prewritten texts, also for end users, i.e. „dispensed to the patient“, „could not be verified“, „end user error confirmed“, etc.).
- c) An attachment can be uploaded to the alert.
- d) An attachment can be uploaded to the group of alerts.

4. Exceptions

- a) *Serial number* field withdrawn – in detail and in the statement.
- b) Action *Add an exception*
 - The field Source has been added (field description „insert a decision of the Ministry of Health“).
 - Changed the wording of „Created“ to „Valid from“.
 - added a field Note (an option to insert text, i.e links to the websites of the Ministry of Health).
 - An option to insert files (jpg, pdf).
