

RE-CERTIFICATION OF IT COMPANIES - CZMVS

Information

Annotation:

The majority of IT companies supplying FMD solutions were certified between 2018 – 2019 (API ver. 1.0 -1.5). Currently API version 2.4. is supported. Over the last **3 years** a **number of improvements** have been implemented to the Czech medicines verification system (CZMVS) that did not need to be utilized by IT companies in their applications, which would however have been desirable for a proper functioning of CZMVS. For that reason we have decided, just as all other countries have done before us, to perform a **re-certification of IT companies for connection to CZMVS**.

The certification will be performed for **version API 2.4**. This API version will be valid at minimum until 10/2023. The companies **do not need to implement bulk operations** unless required by their users. Both testing and self-certification take place in **the IQE environment**.

In order to check whether the API communication between CZMVS and application is correct, you can find all information at: <https://developer-ite.nmvo.eu/it-supplier-testing/it-supplier-qualification-testing-guidance>

Note.: IT companies may send a request CZMVO to provide a set of testing data (PRODUCT CODE, BATCH, SN, EXPIRY DATE). Several tens of thousands of active SNs are available.

Re-certification process in steps:

- I. **Send a request to SolidSoft Reply** to supply a national CZ TEST BOOK for API 2.4. version (each country has its own Test book version).
e-mail: czmvo.support@reply.com
- II. CZMVO will automatically receive the **result** of self-certification (the complete TEST BOOK is sent for examination).
- III. CZMVO can request the IT company to **provide additional information** (especially whether or not it is planned to utilize BULK operations or API communication with the CZMVO Alert Management System (AMS). This will be stated in the certificate.
- IV. Based on the certification result, CZMVO will issue/extend „**Access certificate**“ to CZMVS – **valid for 3 years**.

Note.: The certificate validity period may be shortened/extended depending on CZMVS development.

Important: The certificate is issued by CZMVO to the legal entity (SW company), and hence it is not bound by the specific version of the concerned SW. CZMVO however possesses information about the software used and its version and can request a new re-certification of the SW solution (especially in cases of significant communication or application issues on the side of the concerned software).

Note: SolidSoft Reply partners mutually acknowledge their national access certificates to CZMVS.

Re-certification term: **until 31th January 2023**
